

How to force ACPI in Ubuntu 11.04

This is a quick 'how to' guide to force ACPI within Ubuntu 11.04

As root:

```
cd /etc/default/ nano grub
```

Find the line that contains:

```
GRUB_CMDLINE_LINUX=""
```

And modify it to read:

```
GRUB_CMDLINE_LINUX="ACPI=FORCE"
```

Save out the changes and (still as root) run:

ACPI Force grub.cfg in Ubuntu
